Q4 average monthly revenue is 76% above other quarters for the selected period. Feb/Apr show consistent troughs — recommend shifting promotional spend from peak Q4 toward these months to flatten volatility.

Monthly Revenue Trend

Revenue YTD Cumulative

Budget vs Actual by Month

YoY Revenue Comparison

Recommended Actions— Revenue Overview

- Shift promotional budget from Q4 (already peak-performing) toward Feb/Apr to flatten seasonal troughs
- Set monthly budget targets using the 13-month seasonal pattern rather than a flat growth assumption
- Investigate Dec 2011 budget shortfall — partial-month data likely understates true performance

Recommended Actions— Product Performance

- Exclude non-product SKUs (postage, manual adjustments) from inventory and marketing performance reviews
- Prioritize the top 20 SKUs (≈0.5% of catalog) for stock availability and promotional placement
- Review bottom-quartile, low-volume SKUs for potential delisting or bundling

⊕ Switzerland	56,443.95	21	133
⊕ United Kingdom	73,08,391.55	3920	115

Recommended Actions— Customer Segmentation

- Launch a loyalty / early-access program for Champions — they generate roughly 8.2x revenue per customer vs. the Developing segment
- Target the Developing segment (≈35% of customers) with nurture campaigns to convert them toward Loyal status
- Run win-back offers for One-Time buyers before the typical reorder window closes (≈46 days)

Customer Churn Status

£1,392,904 (15.6% of total revenue) is currently churned or at-risk. The At-Risk segment remains reachable — see the prioritized action queue below.

Revenue at Risk by Churn Status

Churn Risk by Buyer Type

One-time buyers are the only segment where churned customers outnumber active ones (ratio: 1.34). First-purchase follow-up within 30 days is the highest-ROI retention lever available.

Key Drivers of Customer Churn

Key influencers Top segments

What influences churn_status to be Churned ?

When... reency_days goes up 100.00 ...the likelihood of churn_status being Churned increases by Infinity

buyer_type is One-Time 4.23x

freq is 1 or less 4.23x

monetary is 336.13 or less 3.34x

monetary is 336.13 - 636.51 1.35x

On average when reency_days increases, the likelihood of churn_status being Churned increases.

At Risk Customers — Prioritized Action Queue

customer_id	churn_status	reency_days	segment	Total Revenue	Win-Back Priority Score
12409	At Risk	101	At Risk	11,072.67	9,719.34
12435	At Risk	102	Developing	7,829.89	6,785.90
16180	At Risk	123	At Risk	10,254.18	6,494.31
16182	At Risk	95	At Risk	6,617.65	6,250.00
16745	At Risk	109	At Risk	7,194.30	5,675.50
14101	At Risk	96	At Risk	5,976.79	5,578.34
17061	At Risk	96	At Risk	5,232.23	4,883.41
15939	At Risk	112	At Risk	6,115.01	4,620.23
13505	At Risk	95	At Risk	4,393.63	4,149.54
13555	At Risk	96	At Risk	4,149.28	3,872.66

Recommended Actions— Churn Analysis

- Prioritize At Risk customers using the Win-Back Priority Score, not raw revenue — recency matters as much as value
- Launch a 30-day post-first-purchase follow-up campaign — One-Time buyers show the worst churned-to-active ratio of any segment
- Set a 90-day inactivity alert threshold to catch customers before they cross into the harder-to-recover 180+ day zone

EIRE is the strongest international revenue contributor. Australia and the Netherlands exhibit higher average order values despite lower order frequency, indicating opportunities for targeted account management and localized growth initiatives.

Recommended Actions— Geographic Insights

- Strengthen customer retention initiatives in **EIRE**, the most consistent international revenue market.
- Prioritize account-management strategies for **high average order value, low-frequency** countries such as Australia and the Netherlands.
- Evaluate localized marketing campaigns in emerging markets (e.g., USA and Brazil) before making long-term expansion decisions.
